

JavaScript Complete 240-Day Challenge Curriculum

From Beginner to Advanced JavaScript Developer

Days 1-30: Fundamentals

Day 1

Topic: Variables

Challenge: Create a practical coding exercise around Variables.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 2

Topic: Data Types

Challenge: Create a practical coding exercise around Data Types.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 3

Topic: Operators

Challenge: Create a practical coding exercise around Operators.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 4

Topic: Type Conversion

Challenge: Create a practical coding exercise around Type Conversion.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 5

Topic: Template Literals

Challenge: Create a practical coding exercise around Template Literals.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 6

Topic: Conditionals

Challenge: Create a practical coding exercise around Conditionals.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 7

Topic: Loops

Challenge: Create a practical coding exercise around Loops.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 8

Topic: Nested Loops

Challenge: Create a practical coding exercise around Nested Loops.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 9

Topic: Functions

Challenge: Create a practical coding exercise around Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 10

Topic: Arrow Functions

Challenge: Create a practical coding exercise around Arrow Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 11

Topic: Scope

Challenge: Create a practical coding exercise around Scope.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 12

Topic: Hoisting

Challenge: Create a practical coding exercise around Hoisting.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 13

Topic: Truthy/Falsy

Challenge: Create a practical coding exercise around Truthy/Falsy.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 14

Topic: Practice Problems

Challenge: Create a practical coding exercise around Practice Problems.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 15

Topic: Mini Calculator

Challenge: Create a practical coding exercise around Mini Calculator.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 16

Topic: Variables

Challenge: Create a practical coding exercise around Variables.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 17

Topic: Data Types

Challenge: Create a practical coding exercise around Data Types.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 18

Topic: Operators

Challenge: Create a practical coding exercise around Operators.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 19

Topic: Type Conversion

Challenge: Create a practical coding exercise around Type Conversion.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 20

Topic: Template Literals

Challenge: Create a practical coding exercise around Template Literals.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 21

Topic: Conditionals

Challenge: Create a practical coding exercise around Conditionals.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 22

Topic: Loops

Challenge: Create a practical coding exercise around Loops.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 23

Topic: Nested Loops

Challenge: Create a practical coding exercise around Nested Loops.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 24

Topic: Functions

Challenge: Create a practical coding exercise around Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 25

Topic: Arrow Functions

Challenge: Create a practical coding exercise around Arrow Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 26

Topic: Scope

Challenge: Create a practical coding exercise around Scope.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 27

Topic: Hoisting

Challenge: Create a practical coding exercise around Hoisting.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 28

Topic: Truthy/Falsy

Challenge: Create a practical coding exercise around Truthy/Falsy.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 29

Topic: Practice Problems

Challenge: Create a practical coding exercise around Practice Problems.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 30

Topic: Mini Calculator

Challenge: Create a practical coding exercise around Mini Calculator.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Days 31-60: Arrays & Objects

Day 31

Topic: Rest Parameters

Challenge: Create a practical coding exercise around Rest Parameters.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 32

Topic: Maps

Challenge: Create a practical coding exercise around Maps.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 33

Topic: Sets

Challenge: Create a practical coding exercise around Sets.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 34

Topic: JSON

Challenge: Create a practical coding exercise around JSON.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 35

Topic: Array Challenges

Challenge: Create a practical coding exercise around Array Challenges.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 36

Topic: Inventory App

Challenge: Create a practical coding exercise around Inventory App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 37

Topic: Arrays

Challenge: Create a practical coding exercise around Arrays.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 38

Topic: Array Methods

Challenge: Create a practical coding exercise around Array Methods.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 39

Topic: Objects

Challenge: Create a practical coding exercise around Objects.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 40

Topic: Object Methods

Challenge: Create a practical coding exercise around Object Methods.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 41

Topic: Destructuring
Challenge: Create a practical coding exercise around Destructuring.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 42

Topic: Spread Operator
Challenge: Create a practical coding exercise around Spread Operator.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 43

Topic: Rest Parameters
Challenge: Create a practical coding exercise around Rest Parameters.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 44

Topic: Maps
Challenge: Create a practical coding exercise around Maps.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 45

Topic: Sets
Challenge: Create a practical coding exercise around Sets.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 46

Topic: JSON
Challenge: Create a practical coding exercise around JSON.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 47

Topic: Array Challenges
Challenge: Create a practical coding exercise around Array Challenges.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 48

Topic: Inventory App
Challenge: Create a practical coding exercise around Inventory App.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 49

Topic: Arrays
Challenge: Create a practical coding exercise around Arrays.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 50

Topic: Array Methods

Challenge: Create a practical coding exercise around Array Methods.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 51

Topic: Objects

Challenge: Create a practical coding exercise around Objects.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 52

Topic: Object Methods

Challenge: Create a practical coding exercise around Object Methods.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 53

Topic: Destructuring

Challenge: Create a practical coding exercise around Destructuring.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 54

Topic: Spread Operator

Challenge: Create a practical coding exercise around Spread Operator.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 55

Topic: Rest Parameters

Challenge: Create a practical coding exercise around Rest Parameters.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 56

Topic: Maps

Challenge: Create a practical coding exercise around Maps.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 57

Topic: Sets

Challenge: Create a practical coding exercise around Sets.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 58

Topic: JSON

Challenge: Create a practical coding exercise around JSON.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 59

Topic: Array Challenges

Challenge: Create a practical coding exercise around Array Challenges.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 60

Topic: Inventory App

Challenge: Create a practical coding exercise around Inventory App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Days 61-90: DOM

Day 61

Topic: DOM Selection

Challenge: Create a practical coding exercise around DOM Selection.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 62

Topic: Events

Challenge: Create a practical coding exercise around Events.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 63

Topic: Forms

Challenge: Create a practical coding exercise around Forms.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 64

Topic: Validation

Challenge: Create a practical coding exercise around Validation.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 65

Topic: LocalStorage

Challenge: Create a practical coding exercise around LocalStorage.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 66

Topic: SessionStorage

Challenge: Create a practical coding exercise around SessionStorage.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 67

Topic: Dynamic UI

Challenge: Create a practical coding exercise around Dynamic UI.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 68

Topic: Todo App

Challenge: Create a practical coding exercise around Todo App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 69

Topic: Weather UI

Challenge: Create a practical coding exercise around Weather UI.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 70

Topic: DOM Challenges

Challenge: Create a practical coding exercise around DOM Challenges.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 71

Topic: DOM Selection
Challenge: Create a practical coding exercise around DOM Selection.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 72

Topic: Events
Challenge: Create a practical coding exercise around Events.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 73

Topic: Forms
Challenge: Create a practical coding exercise around Forms.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 74

Topic: Validation
Challenge: Create a practical coding exercise around Validation.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 75

Topic: LocalStorage
Challenge: Create a practical coding exercise around LocalStorage.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 76

Topic: SessionStorage
Challenge: Create a practical coding exercise around SessionStorage.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 77

Topic: Dynamic UI
Challenge: Create a practical coding exercise around Dynamic UI.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 78

Topic: Todo App
Challenge: Create a practical coding exercise around Todo App.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 79

Topic: Weather UI
Challenge: Create a practical coding exercise around Weather UI.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 80

Topic: DOM Challenges

Challenge: Create a practical coding exercise around DOM Challenges.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 81

Topic: DOM Selection

Challenge: Create a practical coding exercise around DOM Selection.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 82

Topic: Events

Challenge: Create a practical coding exercise around Events.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 83

Topic: Forms

Challenge: Create a practical coding exercise around Forms.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 84

Topic: Validation

Challenge: Create a practical coding exercise around Validation.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 85

Topic: LocalStorage

Challenge: Create a practical coding exercise around LocalStorage.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 86

Topic: SessionStorage

Challenge: Create a practical coding exercise around SessionStorage.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 87

Topic: Dynamic UI

Challenge: Create a practical coding exercise around Dynamic UI.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 88

Topic: Todo App

Challenge: Create a practical coding exercise around Todo App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 89

Topic: Weather UI

Challenge: Create a practical coding exercise around Weather UI.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 90

Topic: DOM Challenges

Challenge: Create a practical coding exercise around DOM Challenges.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Days 91-120: Async JS

Day 91

Topic: Async Await

Challenge: Create a practical coding exercise around Async Await.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 92

Topic: Fetch API

Challenge: Create a practical coding exercise around Fetch API.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 93

Topic: Error Handling

Challenge: Create a practical coding exercise around Error Handling.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 94

Topic: REST APIs

Challenge: Create a practical coding exercise around REST APIs.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 95

Topic: GitHub API Project

Challenge: Create a practical coding exercise around GitHub API Project.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 96

Topic: Movie App

Challenge: Create a practical coding exercise around Movie App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 97

Topic: Callbacks

Challenge: Create a practical coding exercise around Callbacks.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 98

Topic: Promises

Challenge: Create a practical coding exercise around Promises.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 99

Topic: Async Await

Challenge: Create a practical coding exercise around Async Await.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 100

Topic: Fetch API

Challenge: Create a practical coding exercise around Fetch API.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 101

Topic: Error Handling
Challenge: Create a practical coding exercise around Error Handling.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 102

Topic: REST APIs
Challenge: Create a practical coding exercise around REST APIs.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 103

Topic: GitHub API Project
Challenge: Create a practical coding exercise around GitHub API Project.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 104

Topic: Movie App
Challenge: Create a practical coding exercise around Movie App.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 105

Topic: Callbacks
Challenge: Create a practical coding exercise around Callbacks.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 106

Topic: Promises
Challenge: Create a practical coding exercise around Promises.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 107

Topic: Async Await
Challenge: Create a practical coding exercise around Async Await.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 108

Topic: Fetch API
Challenge: Create a practical coding exercise around Fetch API.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 109

Topic: Error Handling
Challenge: Create a practical coding exercise around Error Handling.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 110

Topic: REST APIs

Challenge: Create a practical coding exercise around REST APIs.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 111

Topic: GitHub API Project

Challenge: Create a practical coding exercise around GitHub API Project.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 112

Topic: Movie App

Challenge: Create a practical coding exercise around Movie App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 113

Topic: Callbacks

Challenge: Create a practical coding exercise around Callbacks.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 114

Topic: Promises

Challenge: Create a practical coding exercise around Promises.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 115

Topic: Async Await

Challenge: Create a practical coding exercise around Async Await.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 116

Topic: Fetch API

Challenge: Create a practical coding exercise around Fetch API.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 117

Topic: Error Handling

Challenge: Create a practical coding exercise around Error Handling.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 118

Topic: REST APIs

Challenge: Create a practical coding exercise around REST APIs.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 119

Topic: GitHub API Project

Challenge: Create a practical coding exercise around GitHub API Project.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 120

Topic: Movie App

Challenge: Create a practical coding exercise around Movie App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Days 121-150: OOP

Day 121

Topic: Objects

Challenge: Create a practical coding exercise around Objects.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 122

Topic: Inheritance

Challenge: Create a practical coding exercise around Inheritance.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 123

Topic: Encapsulation

Challenge: Create a practical coding exercise around Encapsulation.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 124

Topic: Polymorphism

Challenge: Create a practical coding exercise around Polymorphism.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 125

Topic: Composition

Challenge: Create a practical coding exercise around Composition.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 126

Topic: Library Management Project

Challenge: Create a practical coding exercise around Library Management Project.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 127

Topic: Classes

Challenge: Create a practical coding exercise around Classes.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 128

Topic: Objects

Challenge: Create a practical coding exercise around Objects.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 129

Topic: Inheritance

Challenge: Create a practical coding exercise around Inheritance.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 130

Topic: Encapsulation

Challenge: Create a practical coding exercise around Encapsulation.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 131

Topic: Polymorphism
Challenge: Create a practical coding exercise around Polymorphism.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 132

Topic: Composition
Challenge: Create a practical coding exercise around Composition.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 133

Topic: Library Management Project
Challenge: Create a practical coding exercise around Library Management Project.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 134

Topic: Classes
Challenge: Create a practical coding exercise around Classes.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 135

Topic: Objects
Challenge: Create a practical coding exercise around Objects.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 136

Topic: Inheritance
Challenge: Create a practical coding exercise around Inheritance.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 137

Topic: Encapsulation
Challenge: Create a practical coding exercise around Encapsulation.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 138

Topic: Polymorphism
Challenge: Create a practical coding exercise around Polymorphism.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 139

Topic: Composition
Challenge: Create a practical coding exercise around Composition.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 140

Topic: Library Management Project

Challenge: Create a practical coding exercise around Library Management Project.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 141

Topic: Classes

Challenge: Create a practical coding exercise around Classes.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 142

Topic: Objects

Challenge: Create a practical coding exercise around Objects.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 143

Topic: Inheritance

Challenge: Create a practical coding exercise around Inheritance.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 144

Topic: Encapsulation

Challenge: Create a practical coding exercise around Encapsulation.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 145

Topic: Polymorphism

Challenge: Create a practical coding exercise around Polymorphism.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 146

Topic: Composition

Challenge: Create a practical coding exercise around Composition.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 147

Topic: Library Management Project

Challenge: Create a practical coding exercise around Library Management Project.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 148

Topic: Classes

Challenge: Create a practical coding exercise around Classes.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 149

Topic: Objects

Challenge: Create a practical coding exercise around Objects.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 150

Topic: Inheritance

Challenge: Create a practical coding exercise around Inheritance.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Days 151-180: Advanced JS

Day 151

Topic: Closures

Challenge: Create a practical coding exercise around Closures.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 152

Topic: Execution Context

Challenge: Create a practical coding exercise around Execution Context.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 153

Topic: Prototype

Challenge: Create a practical coding exercise around Prototype.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 154

Topic: this

Challenge: Create a practical coding exercise around this.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 155

Topic: Call Apply Bind

Challenge: Create a practical coding exercise around Call Apply Bind.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 156

Topic: Modules

Challenge: Create a practical coding exercise around Modules.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 157

Topic: Generators

Challenge: Create a practical coding exercise around Generators.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 158

Topic: Iterators

Challenge: Create a practical coding exercise around Iterators.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 159

Topic: Proxy

Challenge: Create a practical coding exercise around Proxy.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 160

Topic: Reflect

Challenge: Create a practical coding exercise around Reflect.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 161

Topic: Closures
Challenge: Create a practical coding exercise around Closures.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 162

Topic: Execution Context
Challenge: Create a practical coding exercise around Execution Context.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 163

Topic: Prototype
Challenge: Create a practical coding exercise around Prototype.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 164

Topic: this
Challenge: Create a practical coding exercise around this.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 165

Topic: Call Apply Bind
Challenge: Create a practical coding exercise around Call Apply Bind.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 166

Topic: Modules
Challenge: Create a practical coding exercise around Modules.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 167

Topic: Generators
Challenge: Create a practical coding exercise around Generators.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 168

Topic: Iterators
Challenge: Create a practical coding exercise around Iterators.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 169

Topic: Proxy
Challenge: Create a practical coding exercise around Proxy.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 170

Topic: Reflect

Challenge: Create a practical coding exercise around Reflect.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 171

Topic: Closures

Challenge: Create a practical coding exercise around Closures.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 172

Topic: Execution Context

Challenge: Create a practical coding exercise around Execution Context.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 173

Topic: Prototype

Challenge: Create a practical coding exercise around Prototype.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 174

Topic: this

Challenge: Create a practical coding exercise around this.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 175

Topic: Call Apply Bind

Challenge: Create a practical coding exercise around Call Apply Bind.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 176

Topic: Modules

Challenge: Create a practical coding exercise around Modules.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 177

Topic: Generators

Challenge: Create a practical coding exercise around Generators.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 178

Topic: Iterators

Challenge: Create a practical coding exercise around Iterators.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 179

Topic: Proxy

Challenge: Create a practical coding exercise around Proxy.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 180

Topic: Reflect

Challenge: Create a practical coding exercise around Reflect.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Days 181-210: Functional + Performance

Day 181

Topic: Debounce

Challenge: Create a practical coding exercise around Debounce.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 182

Topic: Throttle

Challenge: Create a practical coding exercise around Throttle.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 183

Topic: Performance Optimization

Challenge: Create a practical coding exercise around Performance Optimization.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 184

Topic: Testing

Challenge: Create a practical coding exercise around Testing.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 185

Topic: Pure Functions

Challenge: Create a practical coding exercise around Pure Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 186

Topic: Higher Order Functions

Challenge: Create a practical coding exercise around Higher Order Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 187

Topic: Currying

Challenge: Create a practical coding exercise around Currying.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 188

Topic: Memoization

Challenge: Create a practical coding exercise around Memoization.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 189

Topic: Debounce

Challenge: Create a practical coding exercise around Debounce.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 190

Topic: Throttle

Challenge: Create a practical coding exercise around Throttle.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 191

Topic: Performance Optimization
Challenge: Create a practical coding exercise around Performance Optimization.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 192

Topic: Testing
Challenge: Create a practical coding exercise around Testing.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 193

Topic: Pure Functions
Challenge: Create a practical coding exercise around Pure Functions.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 194

Topic: Higher Order Functions
Challenge: Create a practical coding exercise around Higher Order Functions.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 195

Topic: Currying
Challenge: Create a practical coding exercise around Currying.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 196

Topic: Memoization
Challenge: Create a practical coding exercise around Memoization.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 197

Topic: Debounce
Challenge: Create a practical coding exercise around Debounce.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 198

Topic: Throttle
Challenge: Create a practical coding exercise around Throttle.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 199

Topic: Performance Optimization
Challenge: Create a practical coding exercise around Performance Optimization.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 200

Topic: Testing

Challenge: Create a practical coding exercise around Testing.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 201

Topic: Pure Functions

Challenge: Create a practical coding exercise around Pure Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 202

Topic: Higher Order Functions

Challenge: Create a practical coding exercise around Higher Order Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 203

Topic: Currying

Challenge: Create a practical coding exercise around Currying.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 204

Topic: Memoization

Challenge: Create a practical coding exercise around Memoization.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 205

Topic: Debounce

Challenge: Create a practical coding exercise around Debounce.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 206

Topic: Throttle

Challenge: Create a practical coding exercise around Throttle.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 207

Topic: Performance Optimization

Challenge: Create a practical coding exercise around Performance Optimization.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 208

Topic: Testing

Challenge: Create a practical coding exercise around Testing.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 209

Topic: Pure Functions

Challenge: Create a practical coding exercise around Pure Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 210

Topic: Higher Order Functions

Challenge: Create a practical coding exercise around Higher Order Functions.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Days 211-240: Algorithms + Projects

Day 211

Topic: Trees

Challenge: Create a practical coding exercise around Trees.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 212

Topic: Graphs

Challenge: Create a practical coding exercise around Graphs.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 213

Topic: Design Patterns

Challenge: Create a practical coding exercise around Design Patterns.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 214

Topic: Chat App

Challenge: Create a practical coding exercise around Chat App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 215

Topic: E-commerce App

Challenge: Create a practical coding exercise around E-commerce App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 216

Topic: Interview Preparation

Challenge: Create a practical coding exercise around Interview Preparation.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 217

Topic: Searching

Challenge: Create a practical coding exercise around Searching.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 218

Topic: Sorting

Challenge: Create a practical coding exercise around Sorting.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 219

Topic: Recursion

Challenge: Create a practical coding exercise around Recursion.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 220

Topic: Linked Lists

Challenge: Create a practical coding exercise around Linked Lists.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 221

Topic: Stacks
Challenge: Create a practical coding exercise around Stacks.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 222

Topic: Queues
Challenge: Create a practical coding exercise around Queues.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 223

Topic: Trees
Challenge: Create a practical coding exercise around Trees.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 224

Topic: Graphs
Challenge: Create a practical coding exercise around Graphs.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 225

Topic: Design Patterns
Challenge: Create a practical coding exercise around Design Patterns.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 226

Topic: Chat App
Challenge: Create a practical coding exercise around Chat App.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 227

Topic: E-commerce App
Challenge: Create a practical coding exercise around E-commerce App.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 228

Topic: Interview Preparation
Challenge: Create a practical coding exercise around Interview Preparation.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 229

Topic: Searching
Challenge: Create a practical coding exercise around Searching.
Difficulty: Progressive.
Goal: Master the concept through implementation, debugging, and refactoring.

Day 230

Topic: Sorting

Challenge: Create a practical coding exercise around Sorting.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 231

Topic: Recursion

Challenge: Create a practical coding exercise around Recursion.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 232

Topic: Linked Lists

Challenge: Create a practical coding exercise around Linked Lists.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 233

Topic: Stacks

Challenge: Create a practical coding exercise around Stacks.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 234

Topic: Queues

Challenge: Create a practical coding exercise around Queues.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 235

Topic: Trees

Challenge: Create a practical coding exercise around Trees.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 236

Topic: Graphs

Challenge: Create a practical coding exercise around Graphs.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 237

Topic: Design Patterns

Challenge: Create a practical coding exercise around Design Patterns.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 238

Topic: Chat App

Challenge: Create a practical coding exercise around Chat App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 239

Topic: E-commerce App

Challenge: Create a practical coding exercise around E-commerce App.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.

Day 240

Topic: Interview Preparation

Challenge: Create a practical coding exercise around Interview Preparation.

Difficulty: Progressive.

Goal: Master the concept through implementation, debugging, and refactoring.
